

Dynamics of Aquatic Warbler population in Lithuania

Only from 2004 Aquatic Warbler counting is taking place regularly in 3 places: 1) In the Eastern shore of the Curonian Lagoon in Tyrai mire and in flooded meadows of Svencelė; 2) in Nemunas delta (Kniaupas bay, surroundings of Krokų Lanka, flooded meadows of Šyša, Sausgalviai, Tulkiaragė, Uostadvaris, Vorusnė and Alka polder meadows, in the old riverbed of Minija); 3) Zuvintas Biosphere Reserve

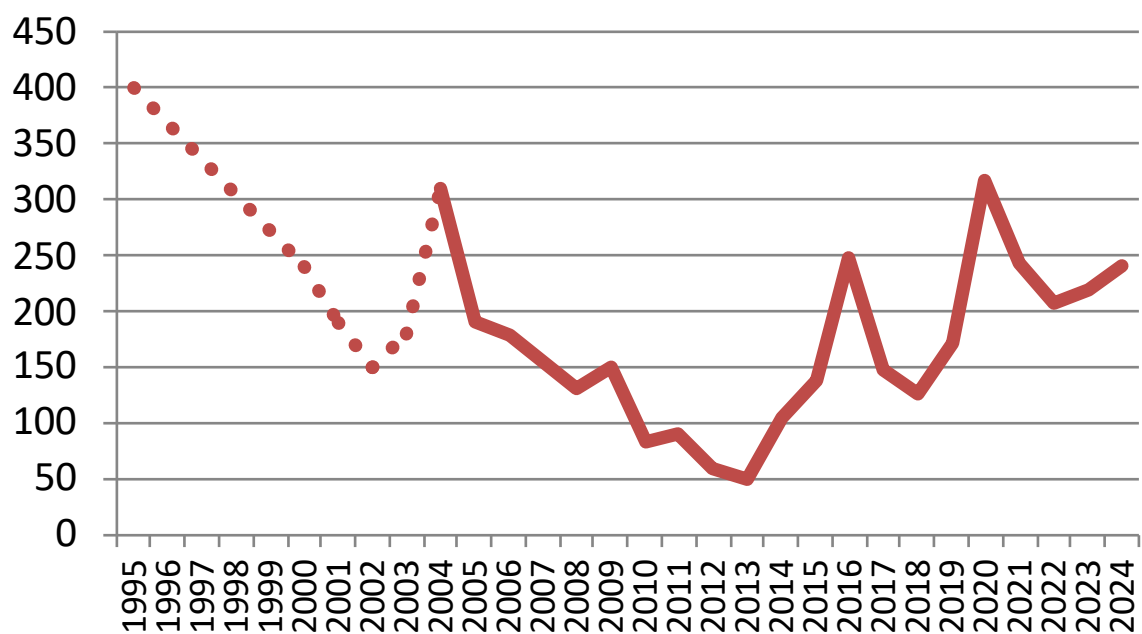

Year	Number of singing males	Comments
1995	400	Data are not accurate because the countings were carried out not in all sites or the different counting methodology was used
2000	240	Data are not accurate because the countings were carried out not in all sites or the different counting methodology was used
2001	190	Data are not accurate because the countings were carried out not in all sites or the different counting methodology was used
2002	150	Data are not accurate because the countings were carried out not in all sites or the different counting methodology was used
2003	180	Data are not accurate because the countings were carried out not in all sites or the different counting methodology was used
2004	310	New population in Nemunas delta Šyša polder was discovered
2005	190	
2006	180	
2008	130	
2009	150	
2010	84	the first Aquatic Warbler conservation project LIFE09/ANT/LT/233 started
2011	90	
2012	60	
2013	50	
2014	106	
2015	138	
2016	247	the second Aquatic Warbler conservation project LIFE15 NAT/LT/001024 started
2017	148	Only data from first counting is used, because the second counting was not performed fully due to the harsh weather conditions
2018	127	
2019	172	
2020	316	
2021	243	
2022	208	
2023	220	
2024	240	

The project "Stepping stones towards ensuring long-term favorable conservation status of Aquatic warbler in Lithuania" (LIFE MagniDucatusAcrola) no. LIFE15 NAT/LT/001024 is financed by the EU LIFE Programme, Ministry of Environment of the Republic of Lithuania and project partners.
